## Press Release - Versatile 3 in 1 Soldering Tip Tester - TMT-ST10

Press Release - August 12th, 2016  
For Immediate Release

Thermaltronics, a manufacturer of soldering systems, incorporating the unique Curie Point Technology for temperature control, has introduced a multifunction soldering tip tester which has the following measurement functions:

- Tip temperature (centigrade to fahrenheit switchable)
- Tip to ground resistance (ohm)
- Tip to ground voltage leakage (mv)

In addition, the unit is provided with a mini USB port, which enables the tester to be connected to a computer, in order to read stored data.

The large LCD display is capable of showing, current test information, data stored in the system memory and any "info" messages such as notices or alerts.

If there are no "info messages", this section of the display will revert to date & time.

Included with the tester is a pack of type "K" thermocouples (ST-SNSR-1), a ground wire (ST-GWIRE) for use when testing for resistance or voltage leakage and a mini usb cable (ST-CABLE-1).

This multifunction tester comes with a 1 year warranty and is one of the most competitive units on the market. Interested customers are invited to learn more about the new solder tip tester (TMT-ST10) by visiting our website at: <http://www.thermaltronics.com>
